Class II drug

For skin problems (itching, contact dermatitis) in delicate areas

プレバリンマイケア

Prevaline MyCare

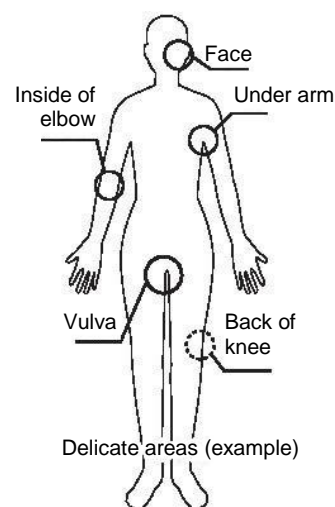

Therapeutic Agent for Skin Trouble

For quick healing on delicate areas

Even mild stimulation may cause itching or redness in delicate areas where the skin is soft. It is caused by perspiration or sweatiness, rubbing of the underwear or clothing, etc., but everyone wants to cure these symptoms quickly.

In addition, if the skin is scratched unconsciously because of too severe itching, the barrier function deteriorates, weakening the resistance that the skin originally had, thereby worsening the skin environment.

Prevaline MyCare is a cream designed to quickly treat such skin problems in delicate areas and restore the skin to its original condition.

Cream for early recovery of skin

1) Weakly acidic cream

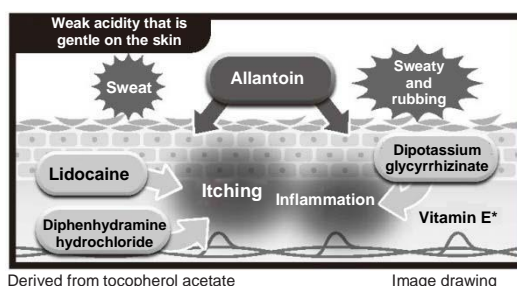

Weakly acidic cream tailored to the skin pH gently cures the affected area.

2) Five active ingredients for skin recovery

Lidocaine and diphenhydramine hydrochloride suppress itching, and dipotassium glycyrrhizinate suppresses inflammation. Allantoin accelerates epidermal repair, and tocopherol acetate (vitamin E acetate) promotes blood circulation to accelerate recovery of the affected area.

3) It suppresses itching and inflammation in delicate areas.

As it does not contain steroids, this product can be used for redness of the private parts and face.

Precautions

Consultation

1. The following persons should contact a physician, pharmacist, or registered salesperson for a consultation before use:

- (1) Patients undergoing medical treatment from a physician
- (2) Patients who have experienced allergic symptoms associated with drugs, etc.

(Be sure to read the reverse side)

(3) Those with severe moistening or erosion

2. If the following symptoms are observed after using this drug, these may be adverse reactions, so immediately discontinue the use, and show this document to your physician, pharmacist, or registered salesperson for a consultation.

Related sites	Symptoms
Skin	Rash/redness, itching, swelling

3. If symptoms do not improve even after using this medicine for 5 to 6 days, stop using this medicine and consult a physician, pharmacist or registered salesperson, being sure to take this instruction leaflet with you.
